

DTS LIGHTING LIVE WITH PROJECTORS FOR CLAUDIA LEITTE

Last July, the double “Ao Vivo em Copacabana” DVD by Brazilian singer Claudia Leitte was released. “Ao Vivo em Copacabana” is Claudia’s first solo album after the end of her long collaboration with the band “Babado Novo”. The double DVD features her extraordinary concert of 17 February held on the beach of Copacabana at Rio de Janeiro, with an audience of 700,000 people. The concert was a unique event in many ways, given the great organizational efforts involved and the exceptionally high level of the sound, video and lighting technologies used.

The technical managers of the event were André Camargo and Caio Stacciarini. DTS played an important role in the concert’s success, and the company “ShowDesign”, responsible for scenery and lighting, installed forty-eight DELTA R FULL COLOUR LED systems, eighty XR8 WASH mobile heads and forty-two XM1200 SPOT mobile heads.

The DELTA’s were mounted on the two vertical towers to the sides of the stage, pointing towards the centre, and at ground level in a position higher than the musicians, backlighting them. The XR8 WASH and XM1200 SPOT mobile heads, arranged in two superimposed rows, were installed along the upper edge of the backdrop erected behind the stage. The lighting design for “Ao Vivo em Copacabana” was created by Rogério Fernandez. The photography director for the video recordings was Cesio Lima.
