## DTS DELTA's and XM's light the 400th E-Jet.

São José dos Campos, Embraer, one of South America's largest aerospace manufacturers, delivered the 400th passenger plane of its highly successful E-Jet series.

The plane, an Embraer 175, was ordered by the US company Republic Airlines, a subsidiary of Republic Airways.

The official handover ceremony was held at the Embraer headquarters, in the presence of the CEO's and representatives of all three companies.

The plane, parked at the centre of one of the massive Embraer hangars, was lit by a system that included eight DELTA FULL COLOUR R LED colour changers and four XM1200 SPOT mobile heads.

The lighting design, which emphasized the elegant lines of the Embraer 175 with uniform and compact colours and projected gobos on the fuselage, was by Luiz Doria.
