

# Tiny sound wonders - DT 60 PRO In-Ear Headphones

## Application

With the DT 60 PRO beyerdynamic presents new earphones with powerful dynamic micro drivers. The earphones have been developed for in-ear monitoring applications on stage but also deliver full range sound for mobile applications with MP3, CD or DVD players. With the help of an innovative, direct coupling of the transducers to the air in front of the human ear drum the DT 60 PRO delivers deep bass, supplemented with well-balanced mids and clearly defined highs.

The design of the DT 60 PRO ensures a very high degree of isolation from external ambient noise, plus their coupling to the ear allows you to listen at comfortably lower volumes, even in loud environments. To ensure an ideal personalized fit and sound experience the DT 60 PRO comes supplied with three pairs of silicon ear pads in different sizes. At only 25 g the DT 60 PRO is the perfect companion on the road or on stage. The DT 60 PRO will be available in black and white.
